Education

University of North Carolina at Pembroke **Pembroke, NC**
Bachelor of Science in Computer Science, Cybersecurity Track *Expected May 2027*

- **GPA:** 3.70/4.00 | Maynor Honors College
- **Relevant Coursework:** Data Structures, Software Development, Object-Oriented Programming, Operating Systems, Cloud Security, and Network Architecture

Technical Skills

Core Languages: Java, Python
Project Exposure: JavaScript, TypeScript, HTML5, CSS3, React, Node.js, Express.js, Spring Boot, FastAPI
Data & AI: SQL, MongoDB, SQLite, JSON, Ollama, REST APIs, local LLM integration
Tools & Practices: Git, GitHub, pytest, curl, API testing, Cisco security tools, technical documentation

Research & Selected Projects

Personal Portfolio & Secure Local AI Assistant | *React, TypeScript, Node.js, Express.js, Ollama* **2026**

- Developed a responsive portfolio with a TypeScript chatbot and separate Node.js/Express backend, connecting browser requests to a locally hosted Ollama language model without exposing the model directly.
- Implemented public and protected API routes, session authentication, restricted CORS, Helmet hardening, trusted JSON grounding, unknown-answer email fallback, and refusal of credentials and secrets.

Undergraduate Research: LLM Poisoning in Cyber Threat Intelligence **2026–Present**
Python, GraphRAG, Knowledge Graphs, Cyber Threat Intelligence

- Conducting faculty-guided research on how poisoned CTI documents and retrieval results can introduce false entity–relation triplets into knowledge graphs and influence downstream AI-generated answers.
- Designed clean and poisoned evaluation conditions using graph precision and recall; evaluating authority weighting, evidence checks, contradiction detection, confidence-weighted edges, and graph quarantine.

UNCP Academic Planner and Course Visualization Tool | *React, TypeScript, FastAPI, SQLite, D3.js* **2026**

- Co-developed a full-stack academic planner supporting catalog search, course details, prerequisite visualization, and multi-semester plan validation through a React client and FastAPI REST backend.
- Owned the layered architecture, system data flow, deployment plan, and relational schema; contributed to unit, API, system, and nonfunctional testing across 42 documented passing test cases.

TriageTap: AI-Powered SOC Copilot | *Java, Spring Boot, MongoDB* **February 2026**

- Contributed across the development lifecycle of an AI-powered incident-response prototype, including backend logic, data modeling, phishing analysis, AI-assisted triage, component integration, testing, and final presentation at HackUNCP.

Technical Experience

UNC Pembroke Division of Information Technology **Pembroke, NC**
Security Operations Center Intern *Summer 2025*

- Used Cisco security tools to review assigned alerts, investigate suspicious endpoints, analyze domains and IP addresses, and document findings within the university's Division of Information Technology.
- Triaged security tickets from initial investigation through resolution, closing verified cases or escalating higher-risk incidents to senior analysts and assisting with endpoint isolation when required.

Leadership

President, ACM Student Chapter, UNC Pembroke *2025–Present*
Lead Resident Advisor (promoted from Resident Advisor), Housing and Residence Life *2024–Present*
